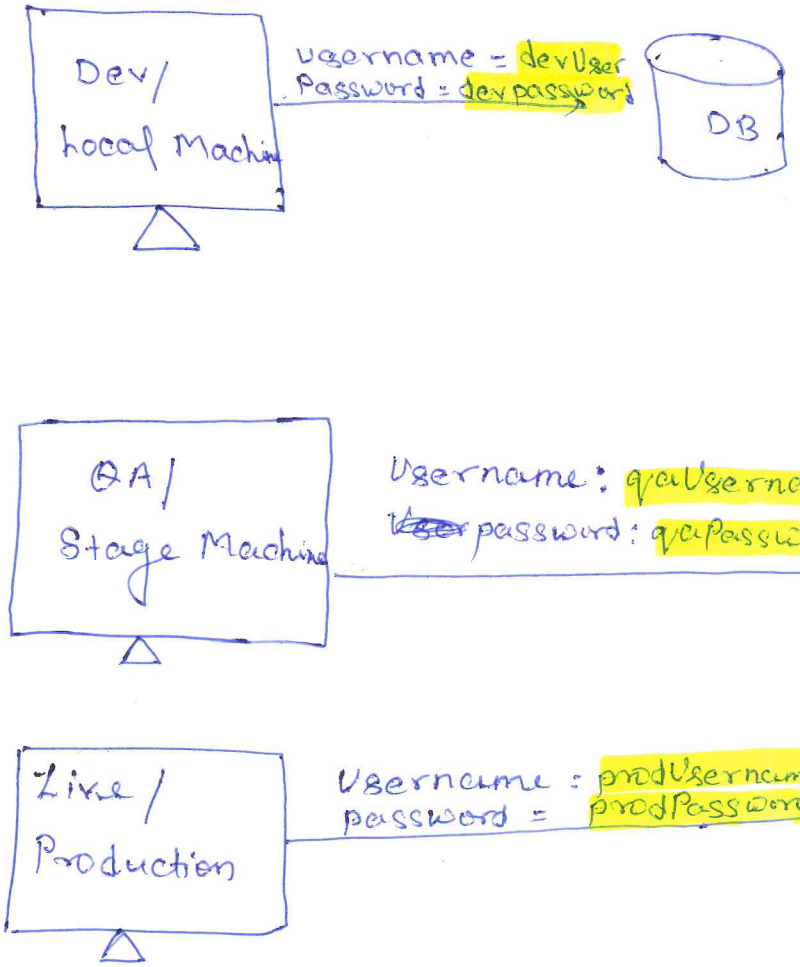
Spring Boot Profiling and @Profile Annotation :- Lecture 10

@Profile Annotation :- @profile is technically intended for environment Separation rather than application specific bean creation.



This "username", "password" is just one example

There are so many other configuration; which are different for different environments, like:

- URL and Port number
- Connection timeout values
- Request timeout values
- Throttle values
- Retry values etc.

dev	qa	Live
45613	45613	65121

Concept && Coding

* We put the configurations in "application.properties" file But how to handle, different environment configurations?

That's where Profiling comes into the picture.

application.properties

application-{profile1}.properties application-{profile2}.properties

- - application-{profileN}.properties.

* And during application startup, we can tell spring boot to pick specific "application properties" file Using "spring.profile.active" Configuration.

application.properties

```
Username = defaultUsername
password = defaultPassword
spring.profile.active = qa
```

Concept && Coding

How we set dynamically ?

- There are two way.

- We can pass the value to the Configuration "spring.profile.active" during application startup itself.

spring boot give more provily dynam envoirm

```
mvn spring-boot:run -Dspring-boot.run.profiles=prod
```

When a time of run spring boot Application internally use a mvn spring-boot:run

it means I am setting in enviornmen variable.

or

Add this in pom.xml

```
<profiles>
    <profile>
        <id>local</id>
        <properties>
            <spring-boot.run.profiles>dev</spring-boot.run profiles>
        </properties>
    </profile>

    |

    |

</profiles>
```

Pick the particular profile.

```
mvn spring-boot:run -P production
```

Concept && Coding

@Profile :

Using @Profile annotation, we can tell spring boot to create bean only when particular profile is set.

@Profile("qa") . equals qa

@Profile("prod" . equals qa * X

* we can set the common seperated .

```
spring.profile.active = prod,qa ---
```
